

$$\frac{70}{100} = \frac{\quad}{\quad}$$

Name: Key

### Precalculus: Unit 5 Pretest Trigonometric Functions

1. Convert  $\frac{7\pi}{18}$  radians to degrees. (N-Q-1) (4 points)

$$\frac{7\pi}{18} \cdot \frac{180}{\pi} = \boxed{70^\circ}$$

2. MULTIPLE CHOICE: If  $\cos 40^\circ = a$ , what is  $\sin 50^\circ$  in terms of  $a$ ? (G-SRT-7) (3 points)

a.   $a$

b.  $\frac{1}{a}$

c.  $90 - a$

d.  $a\sqrt{2}$

3. Find the measure of the radius of a circle with a central angle of  $110^\circ$  that intercepts an arc of 20 centimeters. (F-TF-1) (5 points)

$$\frac{110}{360} = \frac{20}{2\pi r}$$

$$\boxed{r = 10.42 \text{ cm}}$$

4. Use your unit circle to find the exact value (no decimals) of each of the following: (F-TF-2, F-TF-3) (3 points each)

a.  $\cos \frac{11\pi}{6} = \boxed{\frac{\sqrt{3}}{2}}$

b.  $\tan \frac{19\pi}{3} = \tan \frac{\pi}{3} = \boxed{\frac{\sqrt{3}}{3}}$

c.  $\sec \frac{9\pi}{2} = \frac{1}{\cos \frac{\pi}{2}} = \frac{1}{0}$

$\boxed{\text{undefined}}$

d.  $\sin \frac{-15\pi}{4} = \sin \frac{\pi}{4} = \boxed{\frac{\sqrt{2}}{2}}$

5. If the point  $(10, -24)$  is on the terminal side of  $\theta$ , determine the exact value (no decimals) of the six trigonometric functions of  $\theta$ . (Draw an appropriate reference triangle.) (F-TF-3) (7 points)

$$\sin \theta = \frac{-12}{13}$$

$$\csc \theta = \frac{-13}{12}$$

$$\cos \theta = \frac{5}{13}$$

$$\sec \theta = \frac{13}{5}$$

$$\tan \theta = \frac{-12}{5}$$

$$\cot \theta = \frac{-5}{12}$$

6. Given that  $AB = 5$  and  $\tan B = \frac{4}{3}$  in the right triangle below, what is the value of  $\sin B + \cos B$ ? (G-SRT-6) (5 points)

$$\frac{4}{3} = \frac{x}{5}$$

$$x = \frac{20}{3}$$

$$\frac{3}{5} = \frac{5}{y}$$

$$y = \frac{25}{3}$$

$$\sin \theta = \frac{20/3}{25/3} = \frac{4}{5}$$

$$\cos \theta = \frac{3}{5}$$

$$\sin \theta + \cos \theta = \frac{7}{5}$$

7. Solve the following right triangles. Round all answers to the hundredths place. (Make sure your calculator is in degree mode.) (G-SRT-8) (8 points each)

a.

$$\sin 37 = \frac{a}{c}$$

$$\cos 37 = \frac{b}{c}$$

$$a = 4.81$$

$$b = 6.39$$

$$m\angle B = 53^\circ$$

b.

$$A = \tan^{-1}\left(\frac{8}{15}\right)$$

$$c = 17$$

$$m\angle A = 28.07^\circ$$

$$m\angle B = 61.93^\circ$$

8. A surveyor places her telescope on the top of a tripod 5 feet above the ground. She measures an  $8^\circ$  angle of elevation above the horizontal to the top of the tree that is 120 feet away. How tall is the tree? Draw a diagram to represent the situation and calculate the height of the tree. (G-SRT-8) (6 points)

$$\tan 8^\circ = \frac{x}{120} \quad x = 16.86$$

$$\boxed{21.86 \text{ ft.}}$$

9. Batman was standing atop Wayne enterprises when he saw the Bat signal 75 feet above him at a  $30^\circ$  angle of elevation. Detective Gordon is already at the crime scene. The angle of depression from Batman to the crime scene is  $40^\circ$ . If the Bat signal is directly above the crime scene, how far away from the crime scene is Batman? Draw a diagram to illustrate the situation and find the indicated distance. (G-SRT-8) (7 points)

$$\tan 30^\circ = \frac{75}{y} \quad y = 129.9$$

$$\cos 40^\circ = \frac{129.9}{x}$$

$$\boxed{x = 169.58 \text{ ft}}$$

10. In a truck with 36 inch wheels (18 inch radius), if the wheels are rotating at 630 rpm, find the truck's speed in miles per hour. (5 points)

$$\frac{630 \text{ rev}}{1 \text{ min}} \cdot \frac{36\pi \text{ in}}{1 \text{ rev}} \cdot \frac{1 \text{ ft}}{12 \text{ in}} \cdot \frac{1 \text{ mile}}{5280 \text{ ft}} \cdot \frac{60 \text{ min}}{1 \text{ hr}} = \boxed{67.47 \text{ mph}}$$
